Requirement Breakdown Structure

Goal: Ensure that the requirements support each other towards a common goal.

Source: IIBA

Business Requirements

- They represent high-level **objectives, goals, or needs**, outlining the project's purpose;
- **They delineate the objectives necessary** for the project's success;
- They are **organization-centric** rather than specific to any one area;
- They are further **elaborated upon throughout the process**, leading to more specific requirements.

Concepts

Stakeholder Requirements

- These **represent the requirements of a group or stakeholder**;
- They outline how stakeholders will engage with the solution;
- They act as a link between the organization and the units/entities utilizing the solution;
- All stakeholders and their needs must be identified.

Transition Requirements

- They outline the capabilities required for the solution to facilitate the transition from the current state to the desired state;
- These capabilities are temporary and only necessary during the transition phase, becoming obsolete once the transition is finalized.

Functional Requirements

- **User:** Identifies the operations or functionalities accessible to the user;
- **System:** Identifies the behaviors that the solution must exhibit under specific conditions.

Non Functional Requirements

- **Quality:** Encompasses usability, security, speed, and other relevant characteristics;
- **Constraints:** Include factors such as budget, deadline, and technology limitations;
- **Assumptions:** Refers to uncertainties or ambiguous areas requiring clarification.
